

GUIDE TO

SIX CARD POKER

In Six Card Poker™ you play against the dealer for the best five card poker hand. You get to see half of the dealer's hand (three cards), and you can bet more money if you think you have the better hand. The Aces Up side bet pays with a Pair of Aces or better and pays regardless of whether or not you beat the dealer.

4 EASY STEPS:

- 1: Place an Ante bet
- 2: You and the dealer will each receive six cards. The dealer will expose three of the cards from his hand

- 3: Once you see your cards you may either fold and lose your Ante bet or place a Play bet equal to your Ante to stay in the game
- 4: If your hand beats the dealer's hand, you get paid even money on both the Play and Ante wagers. If the dealer does not have Ace-King or higher your Ante is refunded, even if your hand is weaker than the dealer's hand

ACES UP

In this simple side bet you do not have to beat the dealer to win, and it pays even if you fold. Just get a Pair of Aces or better to win! See table for payouts.

See Table Games for Official Rules.
